

Compañía de Transporte de Energía
Eléctrica en Alta Tensión
TRANSENER S.A.

June 2026

Legal Disclaimer

The material that follows is a presentation of general information about TRANSENER as of the date indicated herein and is based on publicly available information. It is in summary form, does not purport to be complete, is not intended to be relied upon as advice to potential investors and may not be disclosed to any other person. No representation or warranty, express or implied, is made concerning, and no reliance should be placed on, the accuracy, fairness, or completeness of the information presented herein.

This presentation contains statements that are forward-looking within the meaning of Section 27A of the Securities Act of 1933, as amended (the "Securities Act"), and Section 21E of the Securities Exchange Act of 1934, as amended. Such forward-looking statements are only predictions and are not guarantees of future performance. Investors are cautioned that any such forward-looking statements are and will be, as the case may be, subject to many risks, uncertainties and factors relating to the operations and business environment of TRANSENER that may cause the actual results of TRANSENER to be materially and adversely different from any future results expressed or implied in such forward-looking statements. Although TRANSENER believes that the expectations and assumptions reflected in such forward-looking statements are reasonable based on information currently available to TRANSENER's management, such expectations and assumptions are necessarily speculative and subject to substantial uncertainty, and as a result, TRANSENER cannot guarantee future results or events. TRANSENER does not undertake any obligation to update any forward-looking statement or other information to reflect events or circumstances occurring after the date of this presentation or to reflect the occurrence of unanticipated events.

Securities may not be offered or sold in the United States unless they are registered or exempt from registration under the Securities Act. Any offering of securities to be made in the United States will be made by means of a private placement memorandum that may be obtained from the placement agents.

Securities may not be offered or sold within the United States or to U.S. persons, except to qualified institutional buyers (as defined in Rule 144A under the Securities Act) in reliance on the exemption from registration provided by Rule 144A under the Securities Act and to certain non-U.S. persons in offshore transactions in reliance on Regulation S.

This presentation does not constitute an offer, or invitation, or solicitation or an offer, to subscribe for or purchase any securities. Neither this presentation nor anything contained herein shall form the basis of any contract or commitment whatsoever.

Industry Overview

Industry Drivers

- Promote private ownership and market-based economic incentives
- Reward efficiency and penalize non-availability
- Regulate natural monopolies for transmission and distribution
- Guarantee open access and safety of the grid
- Protect rights of users and monitor quality of service

Generation

- 477 Generators
- 44.549 MW installed capacity
 - 57% Thermal
 - 39% Renewable
 - 4% Nuclear

Transmission

- One extra high voltage (500-220 kV) transmitter (Transener)
- 7 regional transmitters (including Transba) (220/132kV)
- 2 international transmitters

Distribution

- 28 significant players
- 142.137 GWh/year

Consumption

- Industrial (31%)
- Residential (42%)
- Commercial (27%)

Transmission System

- The electric power transmission system connects the “supply” (generation) with the “demand” (users), determining the highest quality of service that the end user can receive through the operation and maintenance of the facilities. It provides the essential input that distribution uses to deliver electricity to consumers.

Argentine Electricity Market Players

- CAMMESA is responsible for, among other things, billing and collecting charges from WEM agents and making payments for transmission and generation services.

Company Overview

+ 13.341 km (8.290 miles)
and supervises 2.116 km (1.315 miles) of independent transmitters
500 kV and 220 kV Lines

+ 1.170
Highly skilled employees developed through the organization's
own training programs.

+ 53 (supervises 7 of independent transmitters)
Substations

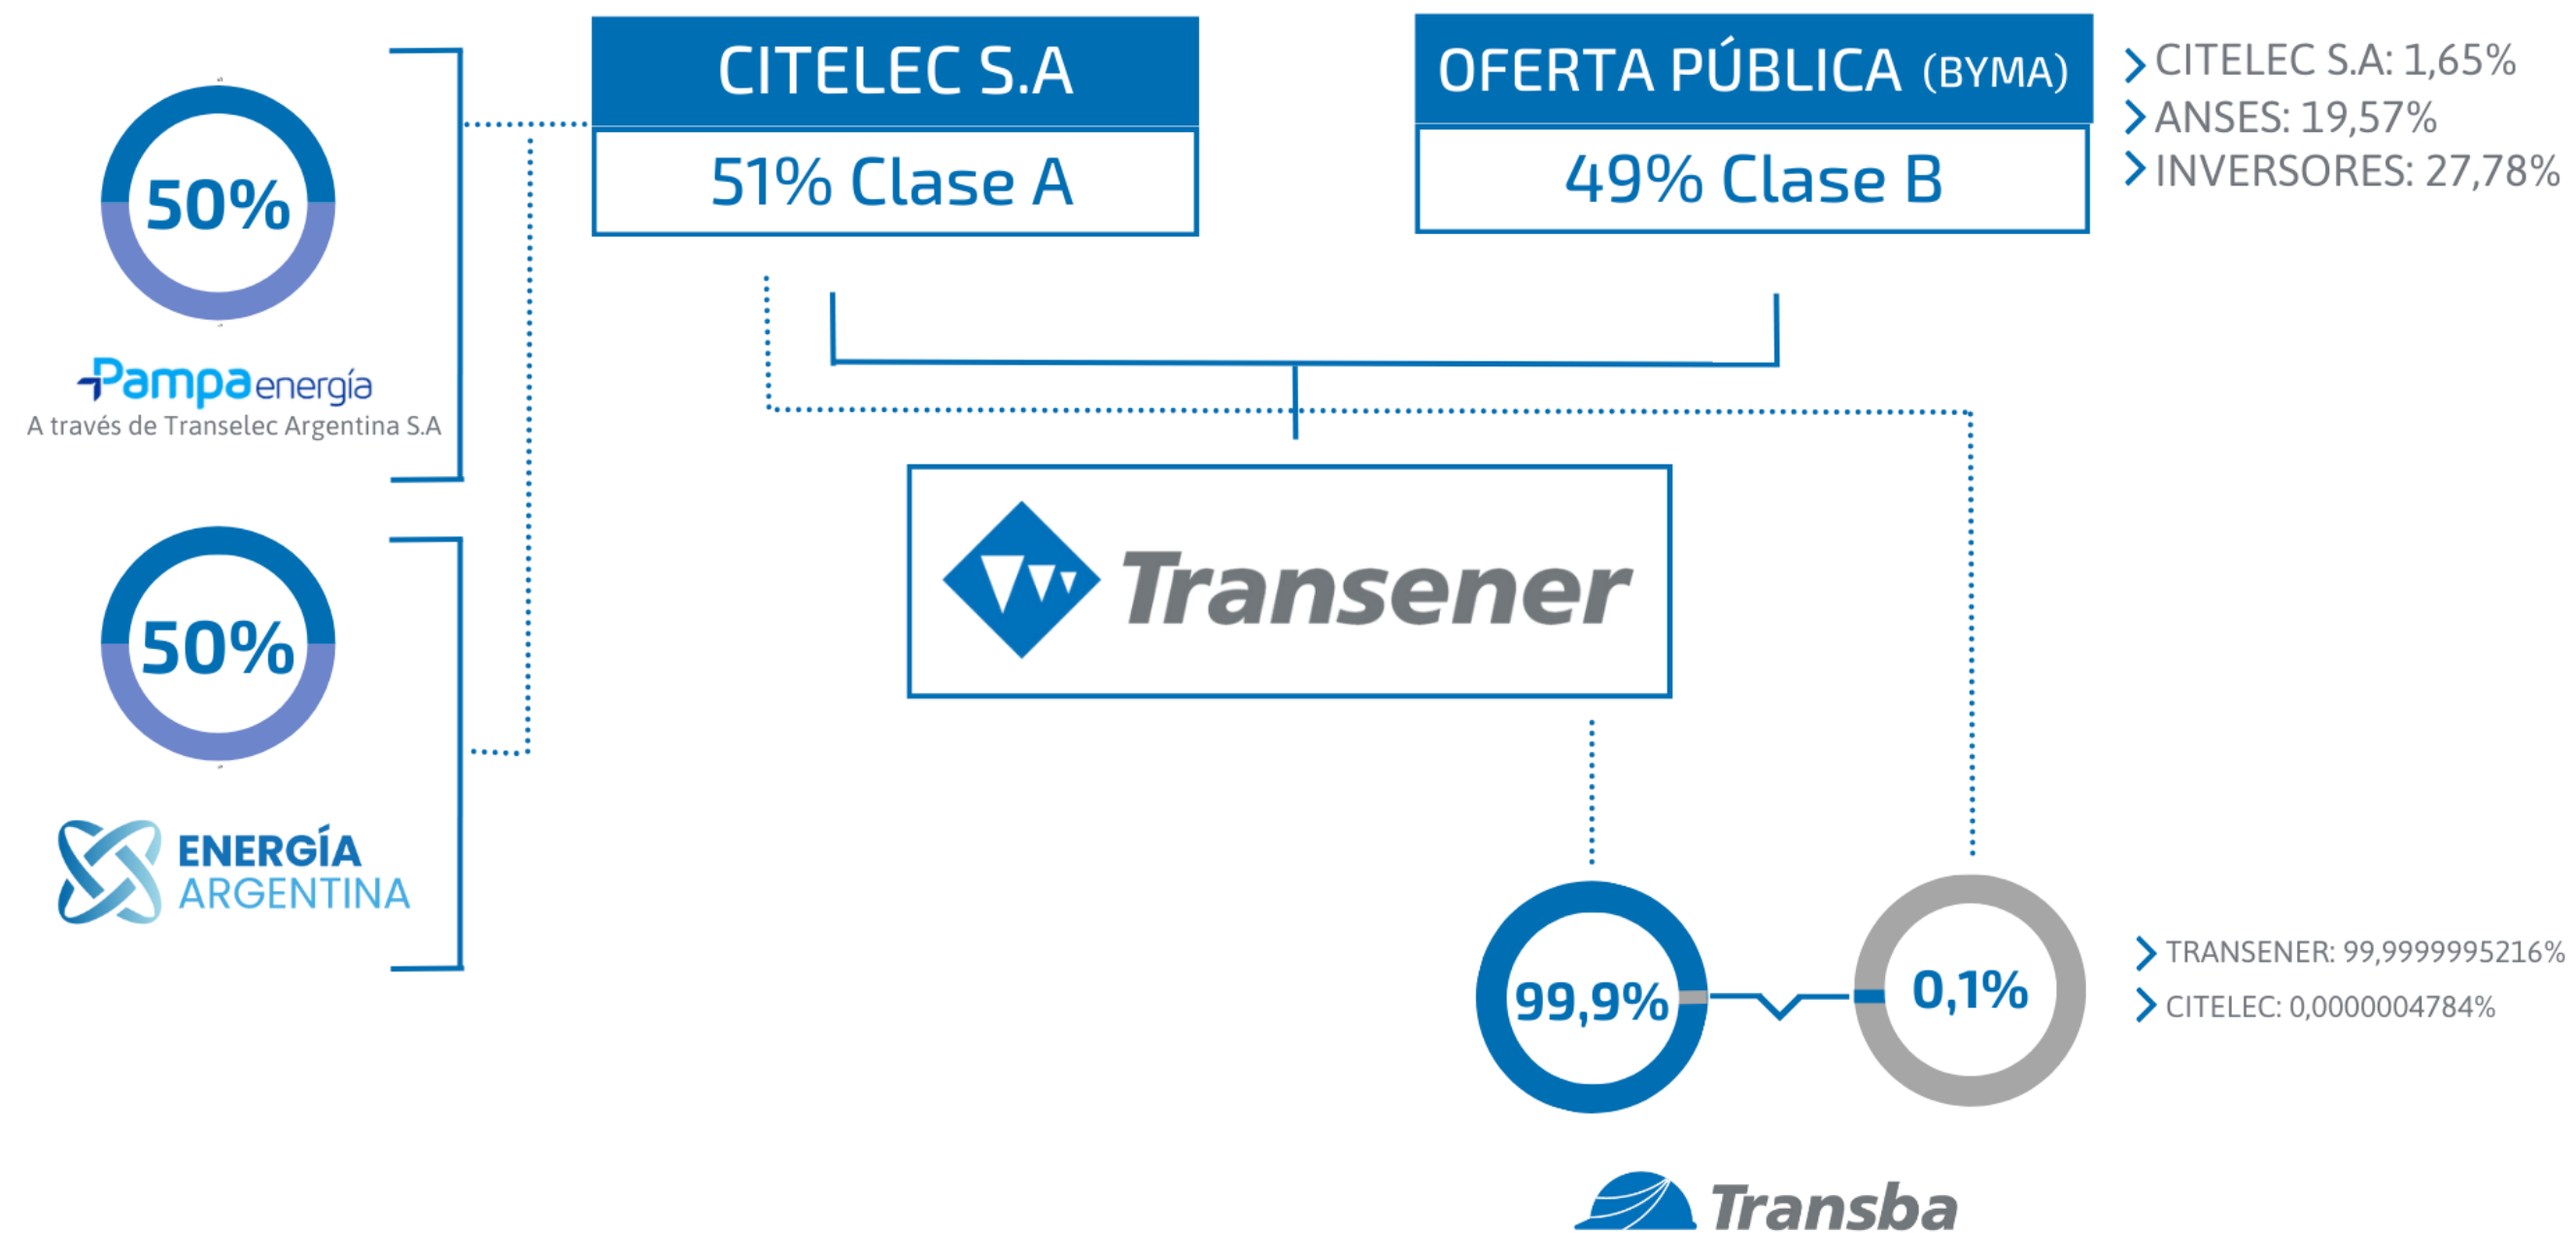

+ 23.355 MVA (supervises 4.200 MVA of independent transmitters)
of transformation capacity

Own material resources for the execution of activities

● Company Overview

6.988 km (4.341 miles)
220 kV, 132 kV and 66 kV lines

+ 600
Highly skilled employees developed through the organization's own training programs.

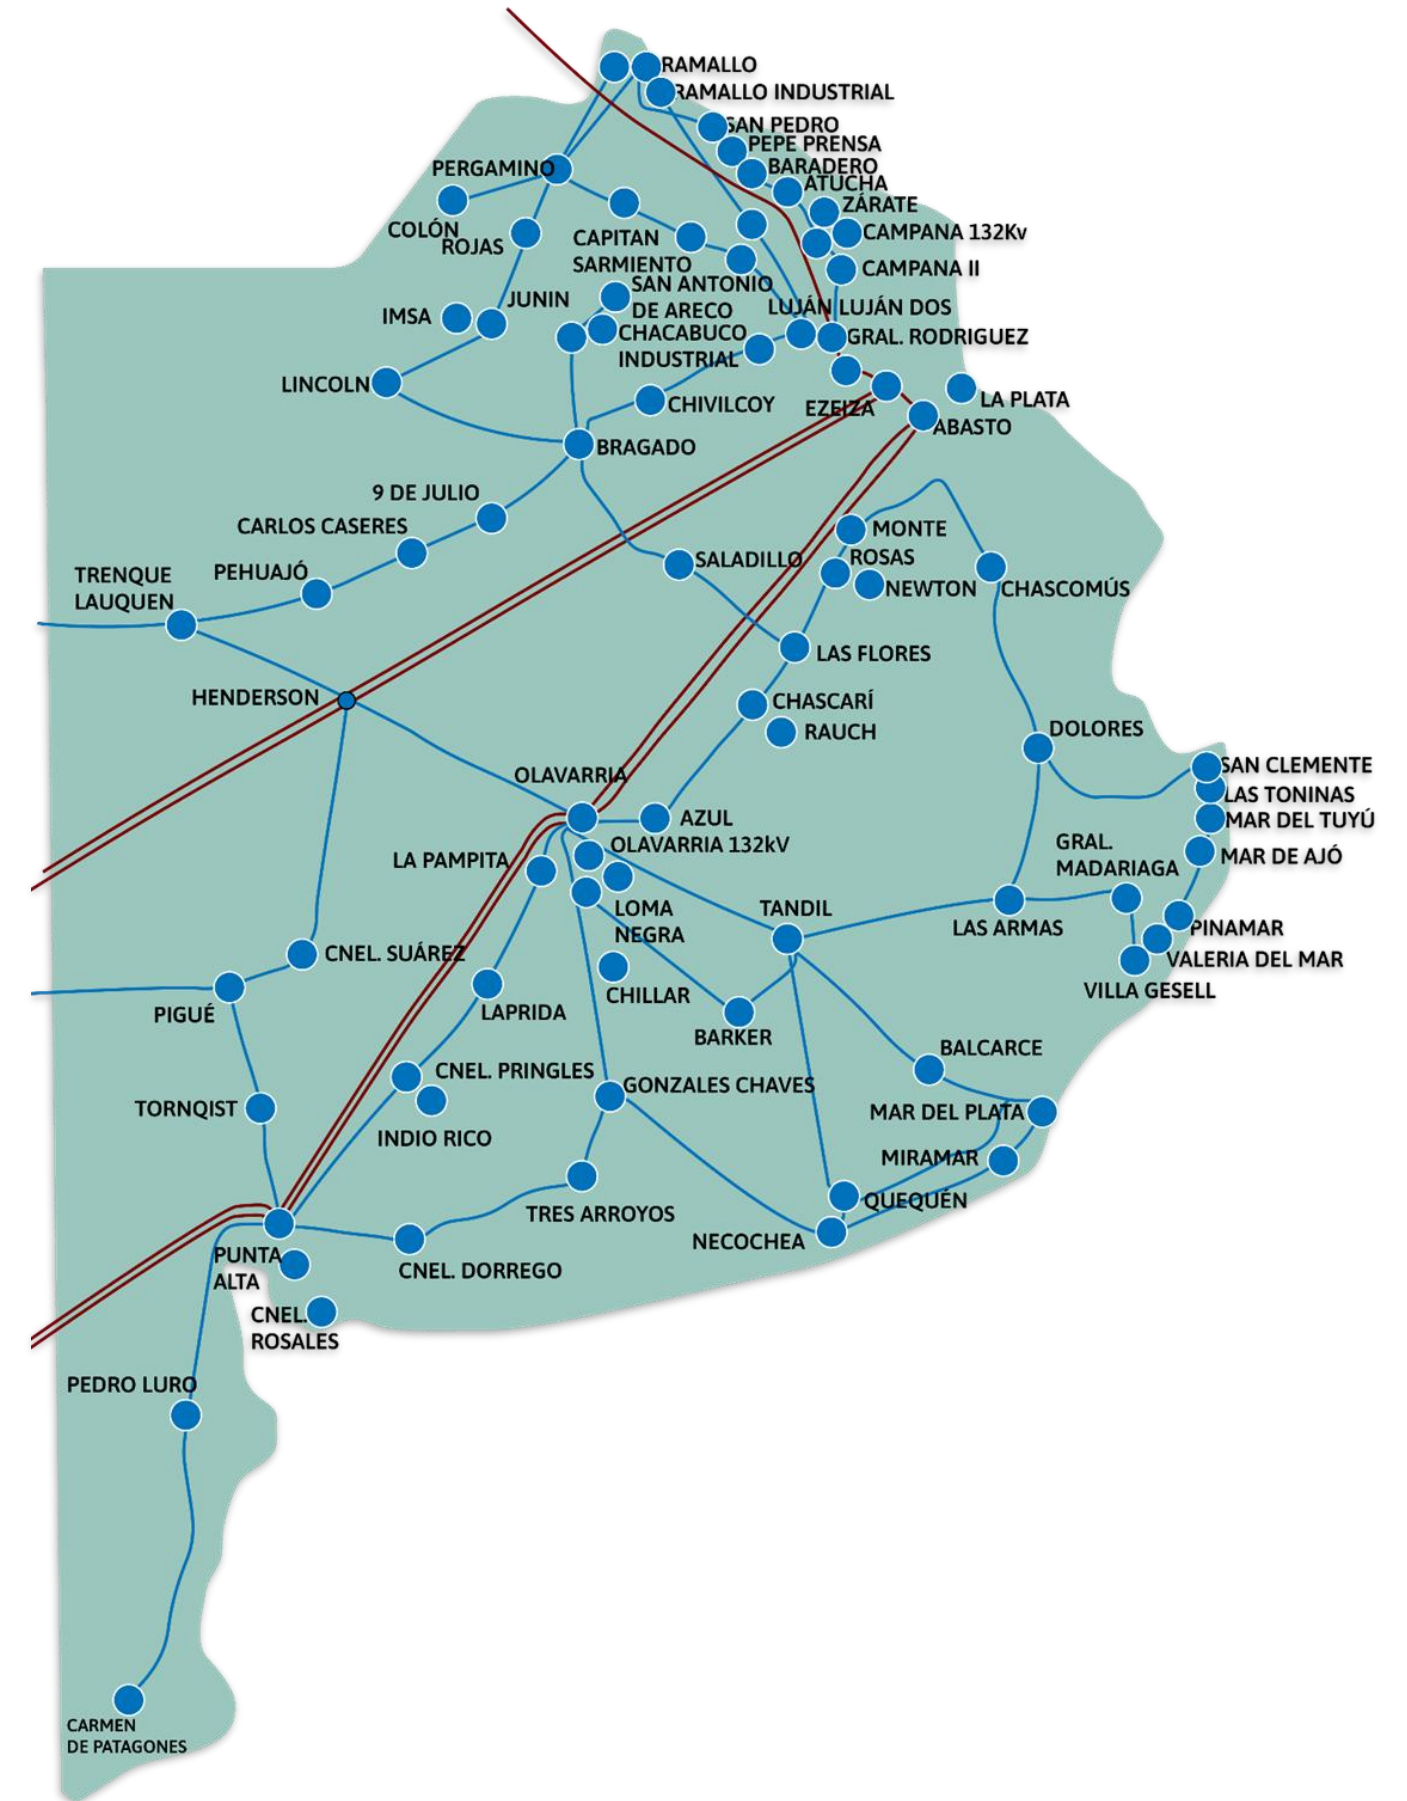

+ 116
Substations

+ 6.853
MVA of transformation capacity

Own material resources for the execution of activities

Regulatory Overview

Regulated Transmission Tariff

Operation and Maintenance Costs

Investments (Capex)

Taxes

Return on Investment

Annual Revenues of the
Transmission Company

- Revenues are set ex-ante for each five-year tariff period.
-
- Tariff Model: Price Cap (does not ensure profitability).
- Regulated tariffs must allow for a reasonable rate of return and be consistent with the Company's operating efficiency.
- **The Transmission Tariff does not include amounts intended for the expansion of transmission capacity, but only to operate and maintain the existing grid.**

Penalty System

- The Concession Agreements establish a system of penalties that we may incur if defined parts of the Networks are not available to transmit electricity.
- Non-availability is divided into two types:
 - Scheduled (which typically result from planned maintenance, incur a reduced penalty of 10% of the rate for forced outages)
 - Forced
- Penalties for forced outages are proportional to the connection and capacity revenues for the equipment involved, taking into account the following considerations:
 - (i) duration of the outage in hours;
 - (ii) number of previous forced outages during such year; and
 - (iii) increase in electricity costs caused by restrictions in the transmission system.
- The minimum amount of penalties levied for a forced outage of a transmission line is that corresponding to an outage of a 100 km transmission line, in the case, of Transener and of a 25 km transmission line, in the case of Transba.

Transener Concession Agreement

➤ The Transener Concession Agreement may only be terminated:

- by the Government if Transener becomes bankrupt

➤ On the Transener Transfer Date, Citelec created a pledge in favor of the Government over the Class A shares which constitute the Transener Controlling Stake

Upon the occurrence of certain events of default, the Government may enforce the Transener Pledge on our Class A shares, and sell the Transener Controlling Stake in a public bidding. Among others:

- (i) penalties in any 12-month period exceed 15% of our total regulated revenue during such 12-month period,
- (ii) a transmission line or connection equipment is out of service for more than 30 days,
- (iii) the Transener Network has on average, more than 2.5 forced outages per 100km over a 12-month period or
- (iv) a transformer is out of service for more than 60 days

Quality of service

- The most representative measurement of quality of service of transmission companies, which allows us to compare ourselves against other electric transmission utilities, is the **failure rate every 100km of lines**.

FAILURE RATE TRANSENER

2.5 is the maximum fault limit permitted, stipulated by the TRANSENER Concession Agreement.

Comparison with other utilities (220-500 kV)

USA / Canada - 0.44
Chile - 0.53

FAILURE RATE TRANSBA

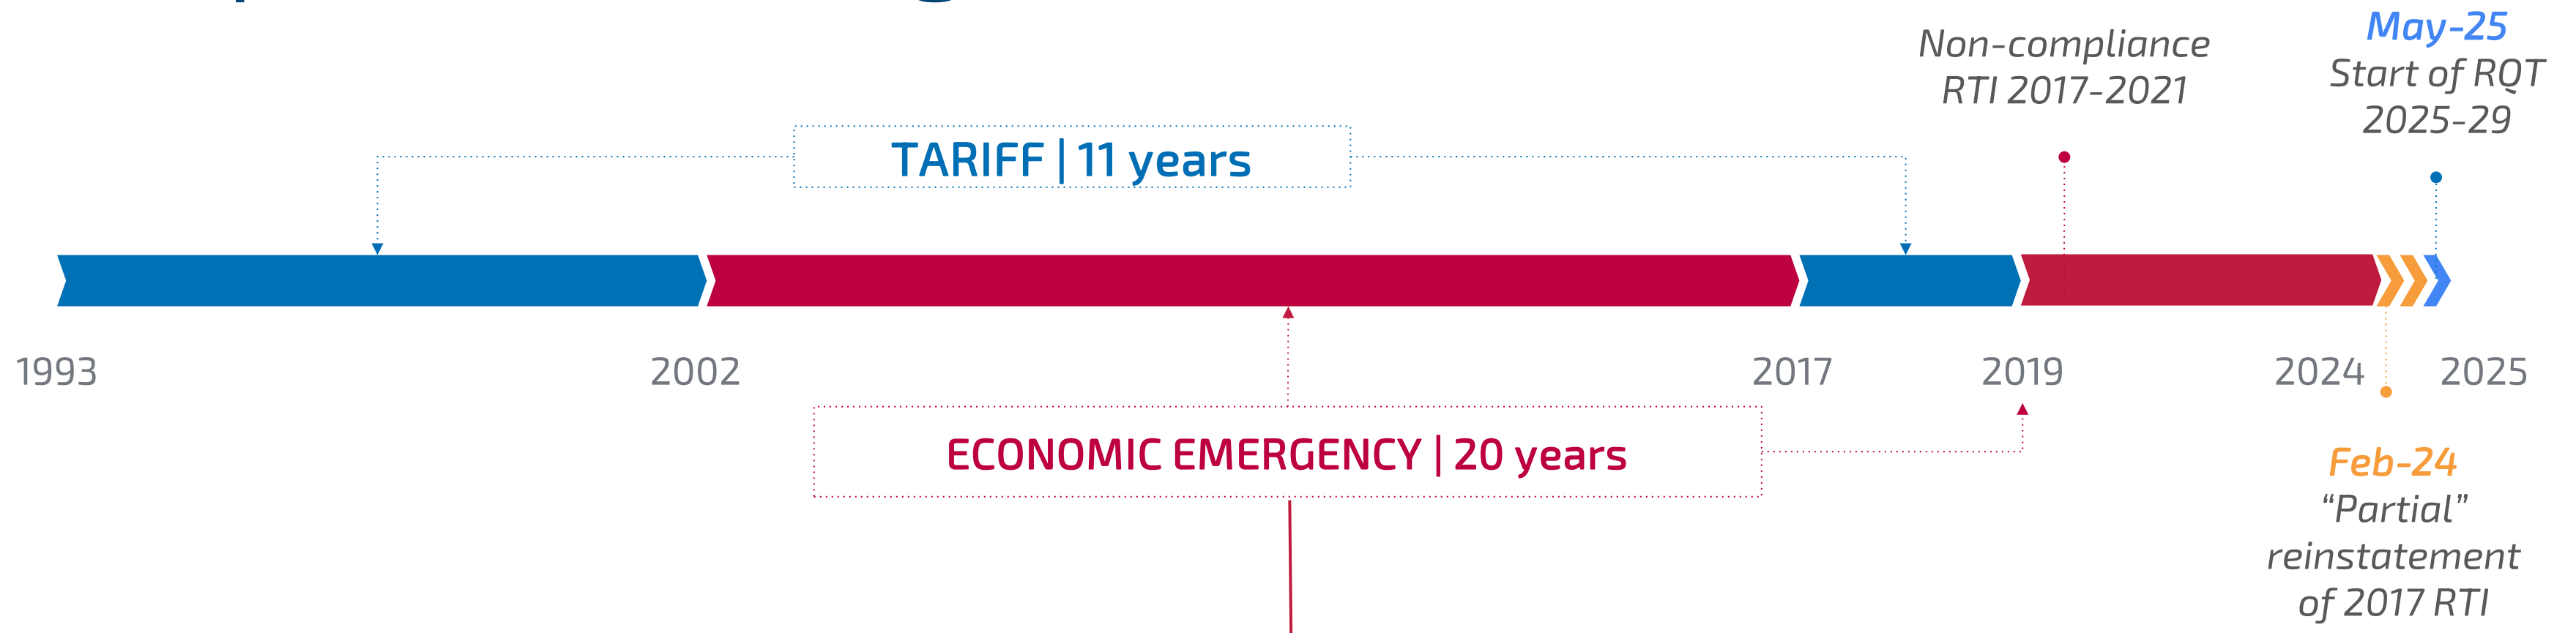

7 is the maximum fault limit permitted, stipulated by the TRANSBA Concession Agreement

Comparison with other utilities (66-132 kV)

USA / Canada - 1.33
Chile - 3.61

Evolution of the Regulatory Framework

Compliance with Regulation

ECONOMIC EMERGENCY

Investment restrictions and lack of profitability to prioritize operating and payroll expenses.

Current regulatory situation

- Within the framework of the Five-Year Tariff Review carried out in 2025, in 2026 the ENReGE continued to apply the monthly tariff adjustment mechanism based on the Consumer Price Index (CPI) and the Wholesale Price Index (WPI).
- As a result of this mechanism, the following resolutions were issued establishing monthly adjustments:

Date (resolution)	Resolution ENRE		Effective from	Increase					
	Transener	Transba		Transener			Transba		
				RQT Increase	CPI/PPI adjustment	Total	RQT Increase	CPI/PPI adjustment	Total
4/30/2025	305/25	312/25	May 1 st , 2025	8,58%	-	8,58%	2,06%	-	2,06%

Financial Overview

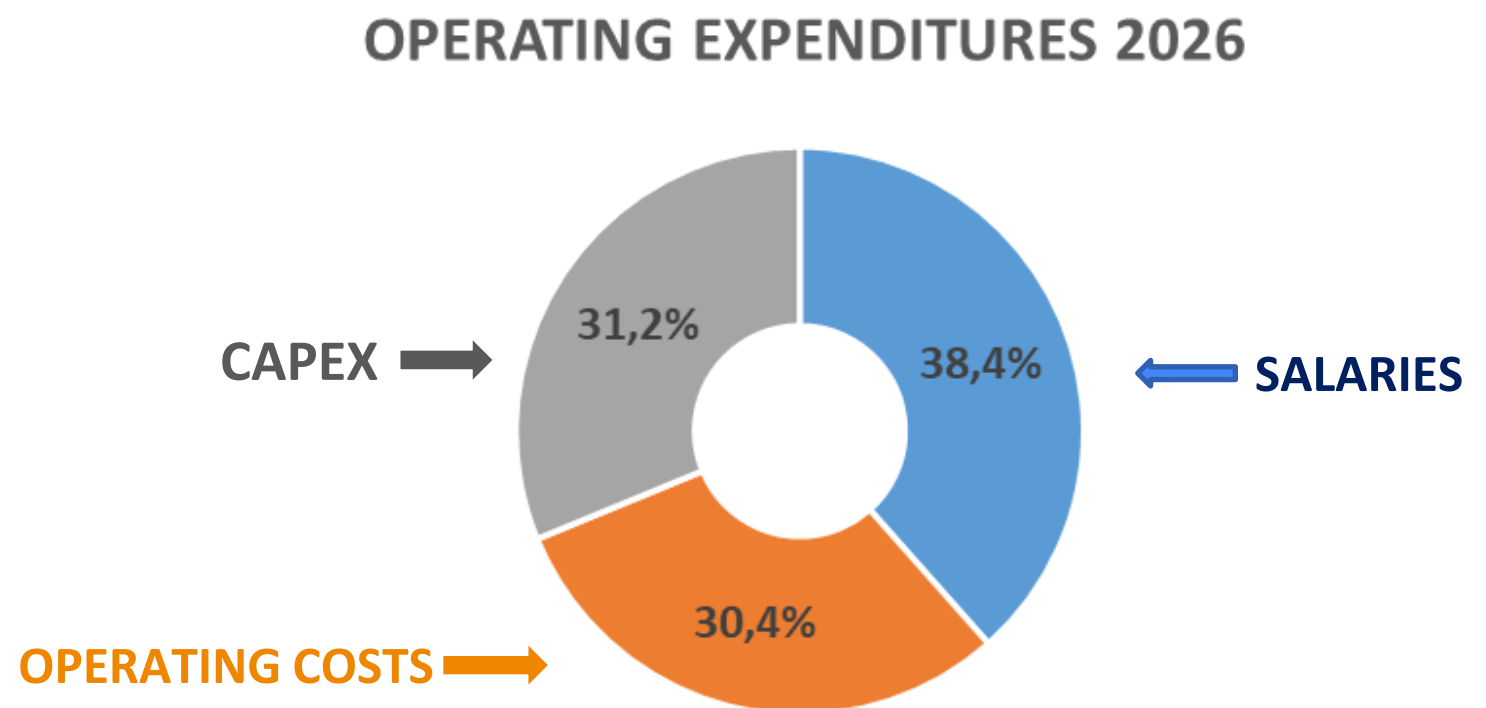

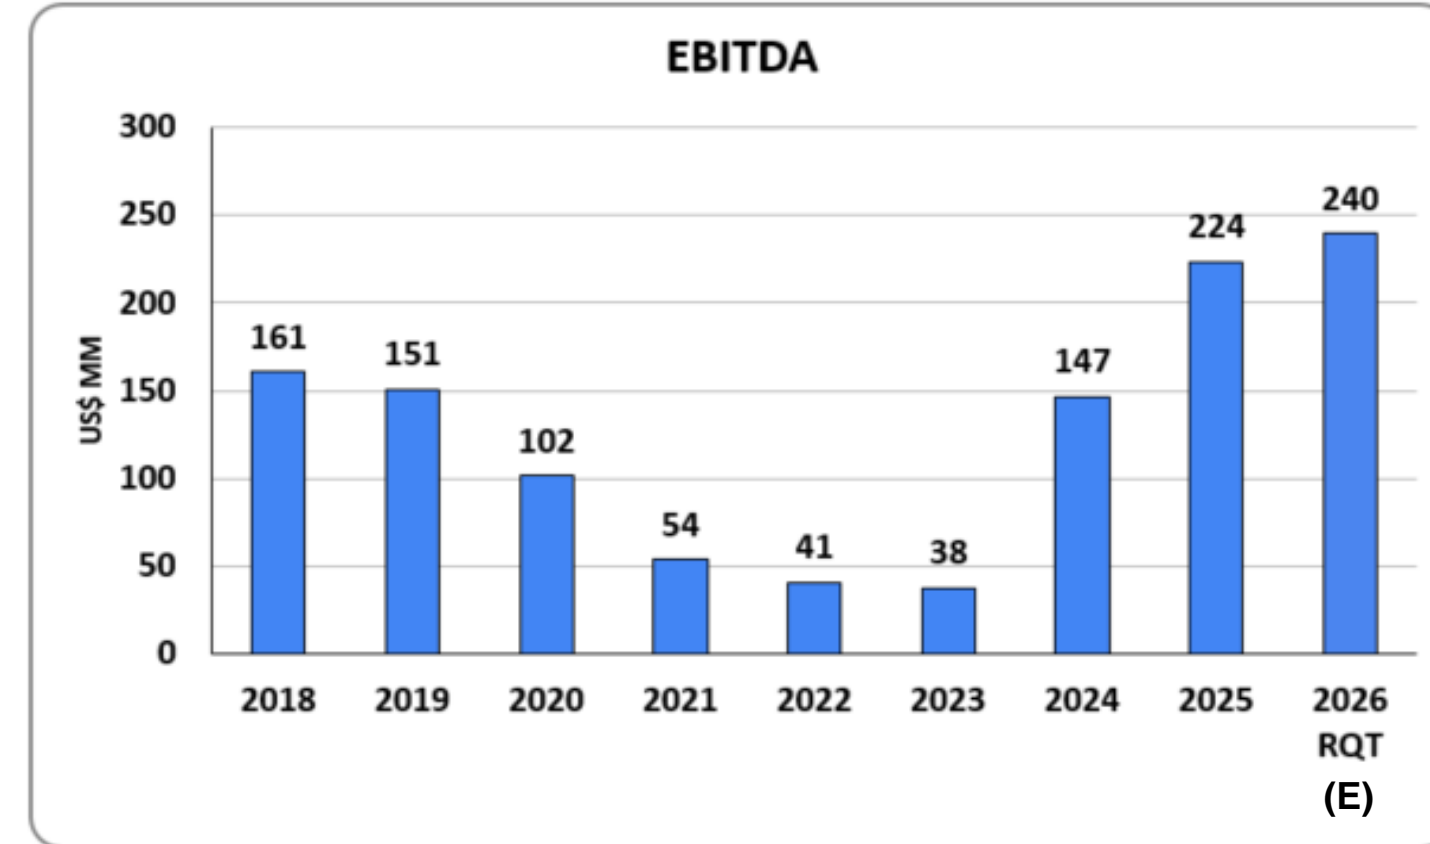

Business Overview

Unique business in Argentina

- Operates **85% of the 500 kV** extra high voltage network in Argentina.
- Operation of **13,341 km of lines and 53 substations**.
- Grid expansion projects supervision.
- Operates and maintains the transmission lines in the Province of Buenos Aires, which concentrates **38% of the country's population**.
- Operation of over **6,988 km of 220, 132 and 66 kV lines and 116 substations**.
- Grid expansion projects supervision.
- **Operation and maintenance services** provided to third parties.
- **Supervision** of independent transmission companies performing construction operation and maintenance contracts ("COM Contracts").
- System expansion projects under COM Contracts.
- Technical assistance and inspections (local and international).
- Equipment installation and training.
- Engineering services.

Key Indicators - Evolution
